PROJECTS

1. Blood Bank Management System in PHP

- This project is related to online blood donation camp. In this camp a Blood Donor can easily donate their blood thru this website and user can easily show his details and edit or delete. Admin can managing stocks, approving blood requests, updating donor information.

2. Smart Lock System in IOT

- The safety in the college is very important. So we present Android Operated Smart Lock System. This system protect our college for strangers ,thieves. This project is based on IOT (Internet Of Things).
- In project, We have taken a smart automatic lock which can be operated by an Android Smartphone.
- Basically we had been constructed a locking mechanism using a motor which would be connected through a controller and controller is connected with Bluetooth module HC-05; so this whole setup is to be connected with android Smartphone via Bluetooth.
